Assessing Performance

Back to Week 3

11/13 points earned (84%)

Quiz passed!

1 / 1 points

1.
If the features of Model 1 are a strict subset of those in Model 2, the TRAINING error of the two models can **never** be the same.

1 / 1 points

2.
If the features of Model 1 are a strict subset of those in Model 2, which model will USUALLY have lowest TRAINING error?

0 / 1 points

3.
If the features of Model 1 are a strict subset of those in Model 2. which model will USUALLY have lowest TEST error?

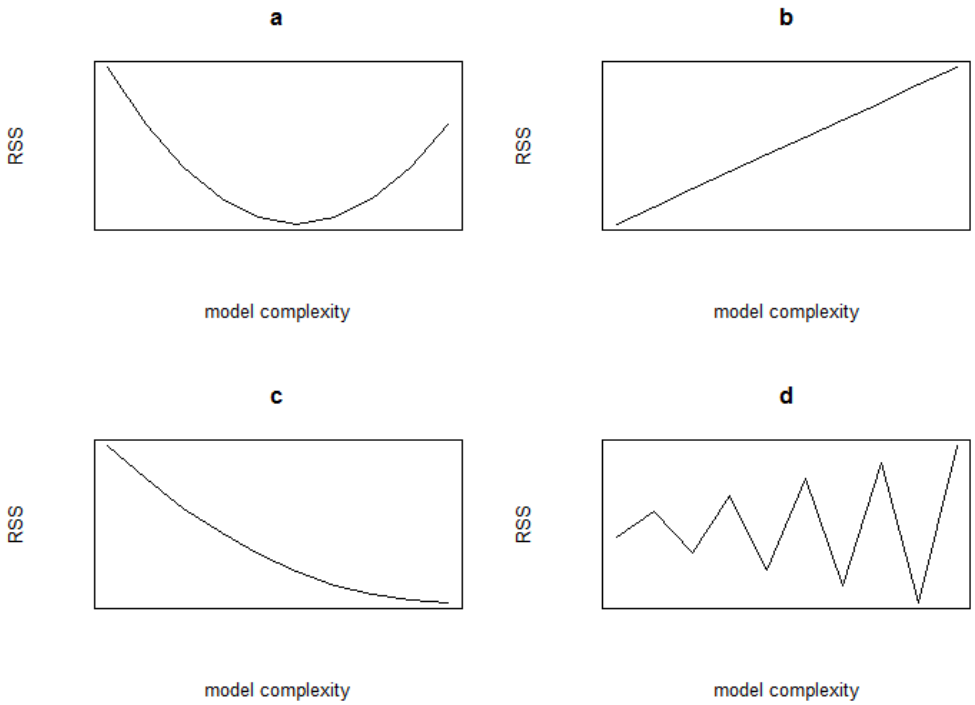
1 / 1 points

4.
If the features of Model 1 are a strict subset of those in Model 2, which model will USUALLY have lower BIAS?

1 / 1
points

5.

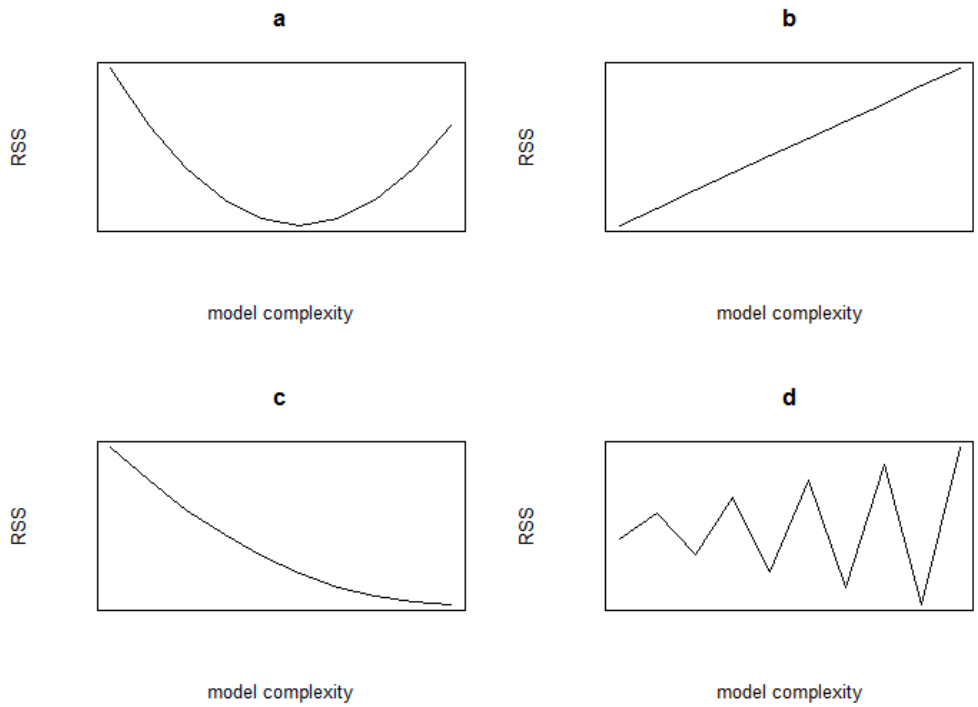
Which of the following plots of model complexity vs. RSS is most likely from TRAINING data (for a fixed data set)?



1 / 1
points

6.

Which of the following plots of model complexity vs. RSS is most likely from TEST data (for a fixed data set)?



---

1 / 1 points

7.

It is **always** optimal to add more features to a regression model.

---

1 / 1 points

8.

A simple model with few parameters is most likely to suffer from:

---

1 / 1 points

9.

A complex model with many parameters is most likely to suffer from:

---

1 / 1
points

10.
A model with many parameters that fits training data very well but does poorly on test data is considered to be

---

0 / 1
points

11.
A common process for selecting a parameter like the optimal polynomial degree is:

---

1 / 1
points

12.
Selecting model complexity on test data (choose all that apply):

---

1 / 1
points

13.
Which of the following statements is true (select all that apply): For a **fixed model complexity**, in the limit of an infinite amount of training data,

---
